Abstract

Today, identification of necessary infrastructures is very important for creating innovation in organizations. Infrastructures were studies separately in previous studies, but the present study investigated the direct and indirect Effect of Social Capital and Transformational Leadership on Innovation Performance regarding the Mediating Role of Knowledge Management and Organizational Learning through a comprehensive model. This study was done on a sample consisting of 210 participants from Shatel Company personnel in Tehran who were selected through simple random sampling. The method of this study was correlational and a questionnaire was used as the instrument of this study. Structural Equation Modeling through Lisrel 8.8 Software was used for the data analysis. The results of this study showed that exogenous variables (social capital and transformational leadership) could not have a direct positive effect on knowledge management, but could have a direct positive effect on organizational learning and innovation performance. In addition, knowledge management had a direct positive effect on innovation performance and organizational learning. Organizational learning also had a direct significant positive effect on innovation performance.

Abstract

The issue of social capital is a concept which has been emerged in all economic, social, political and cultural aspects in recent years. This concept includes all interactions, relationships, cooperation, commitment and interest which have connected people of the society. Having its role and social importance, it can influence security dimensions including economic, political, juridical and social-mental dimensions. The purpose of this study is the investigation of social capital status and security in Lorestan province, as well as, evolution of correlation rate between Social capital as an independent variable and security as the dependent variable. Descriptive –Correlative method was used for this Survey Research resulting in the role of social capital based on current attitudes, determined on three dimensions – structural, cognitive and communicative, has had effects on four aspect of security. The correlation rate between Social capital and economic, political, social-mental and juridical aspect of security was 0.28, 0.23, 0.21 and 0.51, respectively. Totally, correlative coefficient equal 0.63 indicates high correlation between Social capital and security, and in fact, the considerable role of social capital in security
